

## Potassium Phosphonates Consortium (PPC)

### Letter of access criteria

The PPC Consortium offers a letter of access as an alternative to membership of the Consortium for access to all the registration data as part of the SIEF for the following substances.

Substance Name	EC Number	CAS Number
Potassium hydrogen phosphonate (*)	604-162-9	13977-65-6
Reaction mass of dipotassium phosphonate and potassium hydrogen phosphonate (*)	915-179-9	n.a.
dipotassium phosphonate (**)	236-809-2	13492-26-7

(\*) <1000 tpa

(\*\*) <100 tpa

A letter of access means that the company will be part of the joint registration from the lead registrant, which will contain all the necessary data for the REACH registration and the CLP Classification of the substances in question. The company in this case only has to fill in the company details, substance information, the use information and will also include a CSR (jointly developed but for individual submission) and for the rest of the file refer to the lead registrant file. The lead registrant(s) will issue a security token and the other registrants will use this for their own registration submission.

The lead registrants have submitted the dossiers in June/July 2013.

In addition to this the Consortium has put on the SIEF web site a suggested list of uses (the same included in the dossier) [http://www.silcfertilizzanti.it/main/index.php?id\\_paq=88](http://www.silcfertilizzanti.it/main/index.php?id_paq=88)

The cost for the letter of access to the company was a one time payment of 19,000.00 Euros for tonnages below 1000 t/year and 18,000.00 Euros for tonnages below 10 t/year. This price is independent of number of substances and we will provide all requested tokens.

Being two substances non phase-in, included in the LoA's price, PPC will provide some services for the inquiry process: analytical suggestions, basic assistance, email correspondence, etc.

Ravenna, July 2018  
The Consortium Manager  
Mariano Alessio Verni
